Appendix B: Approval of Success Criteria

Date: 1/10/2024

I reached out to my client via email a few days later and emailed him about the success criteria that I outlined to confirm they meet his requirement. Here is a screenshot of the Email:

Good Afternoon Mr. Weatherby,
It was nice talking to you a few weeks ago. Thank you again for sharing the details with me. I have created a success criteria list based on your requirements. I would request you to go through it and seek your approval to proceed further with my internal assessment. These are the success criteria list:

1. The system must ensure that all dining hall supervision slots are filled for each day (Monday to Saturday), covering breakfast, lunch, and dinner.
2. Workloads must be distributed fairly among all tutors, ensuring no tutor is assigned more than four or five supervision slots per week.
3. Tutors must specify their unavailability, and the system must prevent scheduling during these times, avoiding any conflicts where multiple tutors are unavailable for the same slot.
4. The system must avoid scheduling tutors during other commitments (teaching or recurring pastoral duties) and handle fixed slots for specific tutors with weekly commitments.
5. It should allow manual intervention for unfilled slots, suggesting alternative candidates from other boarding houses when necessary.
6. The system should distribute unpopular slots (e.g., early breakfast, Saturday dinner) fairly across tutors to share the burden.
7. A user-friendly interface should allow for simple input of availability and automatic, transparent slot allocation, with feedback when conflicts arise.
8. Tutors' availability data, provided by the assistant house parents, will serve as the basis for scheduling decisions.
9. The system must enable comparisons between manual and automated allocations to assist in measuring efficiency.
10. A mechanism for random assignment of tutors to slots should be implemented while respecting availability and fairness constraints.
11. Each boarding house should contribute evenly to supervision duties, with rotation configurations for different houses.
12. Tutor preferences for specific time slots should be considered to accommodate personal or logistical needs.
13. Tutors could be represented by a unique identifier to simplify input and allocation without revealing personal data in the system.
14. The system should generate reports or schedules that can be shared with tutors and assistant house parents, clearly displaying assigned slots and unfilled gaps. Kind Regards,

Ryan

Weatherby, Mr JA

Dear Ryan,

Many thanks for your email and I think you have a good grasp of the situation. Just so that you're aware, on every weekday there are slots for breakfast, three slots over lunch and then one slot for dinner. I have copied a blank document for you to see the template that is sent to staff.

We also don't tend to use tutors from other houses when there is no staff available but we can look at this as a possible solution.

Thanks for your help.

Mr W
